# A BOLD, AMBITIOUS VISION

---

Located in the eastern Greater Toronto Area, the University of Ontario Institute of Technology has a bold, ambitious vision: to take on society's grand challenges and find solutions to meet and exceed tomorrow's needs.

As one of Canada's newest universities, our more than 80 specialized and modern research laboratories and facilities support our commitment to attracting leading scholars and creating unparalleled student learning experiences.

By teaching students new approaches to problem solving along with innovative uses of technology, our graduates are highly engaged citizen leaders with an entrepreneurial spirit, prepared to excel in the modern workplace, and ready to lead their peers.

We offer in-class and online undergraduate and graduate degrees in market-oriented programs that use industry-current, program-specific software. Areas of study include:

- Business
- Education
- Energy Systems and Nuclear Science
- Engineering
- Health Science
- Humanities
- Information Technology
- Science
- Social Science

In addition to excellence in teaching, we offer students practical learning opportunities in real-world settings through internships, co-ops, practicums, research projects and more. In fact, 85 per cent of upper-year undergraduate students participate in hands-on experiential learning.

Our professors, researchers, students and other faculty experts engage with 300-plus industry and community partners like Ontario Power Generation, SickKids, Grandview Children's Centre and IBM.

Equipped with this entrepreneurial spirit and the capacity to adapt to changes in technology, our graduates consistently find employment in their chosen fields—at a rate above the provincial average.

The university continues to evolve into an even more innovative mixed-use, vibrant research and development hub. With 190 acres of new land available for expansion, the university is positioned to establish the new classrooms, laboratories and infrastructure required to provide students, professors and researchers with the spaces they need to build Canada's competitiveness, and create the most exciting and rewarding educational experience available.
