

How to share your Kaltura video using a link (download or view)

Introduction

You can share your Kaltura video or audio recording by sharing a downloadable or viewable version through a weblink (you can also embed it in your course site or make it accessible as a [download](#)). This document explains how to locate the weblink for your Kaltura video or audio recording, and if you choose, make it only viewable.

How to get a web link for your Kaltura video

1. In your Canvas course, select the **My Media** option in the left navigation menu (if this option does not appear, it may need to be unhidden on the menu).
2. To the right of your video that you wish to share using a link, select the **Edit** icon, which appears as a pencil.
3. Near the top right of the video player, select the **Share** button (appears as three connected dots).

4. Select the web link and either right click to select 'Copy' or use the Ctrl + C or Command + C keys to copy the link to your clipboard. Note: to have the video begin at a certain point you can enter a time in the 'Start video at' field and then copy the link for sharing.
5. To make the video viewable only, replace the numbers that appear between `uiconf_id/` and `/entry id/` in the web link of a Kaltura video with 44630412 to remove the 'download' icon from appearing.

**Screenshots provided in the steps above were retrieved from the Kaltura Capture interface.*

Reminder

- Any content you retrieve from the course site is subject to copyright protections. As a student you have responsibilities under the [Academic Integrity Policy](#) and [Intellectual Property Policy](#).
